

AOM and Workware

Refresher Training

This Course suits

This one day course is aimed at Managers and Team Leaders working in operations wishing to refresh their AOM practices to improve operational control.

Content Overview

Getting back to basics: what Operations Management is about.

Myth busting: dealing with any inappropriate “folklore” that has grown up around AOM and re-establishing the founding principles.

Habit changing: getting out of bad habits in planning and variance analysis.

Benefits and Outcomes

In many cases a refresher can release significant latent capacity, but mostly this is about ensuring that the investment in AOM and ongoing investment in Workware delivers full value.

This can lead to improvements in morale and a renewed sense of energy for all managers involved.
